

 = confirmed sighting (at least 1 Stellar Phenomenon in system)

## Proposed Name: Carina-Sagittarius Peduncle Gardens

At least 79 confirmed sightings of stellar phenomena in July 3305 by CMDR hnt2k8 and CMDR atomfarin of the BLUE Squadron on a detour returning home from DW2 via “The Voyage Home” trail.

Superficial mapping of the area revealed: Area spread over approx. 4500 Ly with a black hole encased in a reddish nebula at the center. Abundance of Stellar Phenomena (mainly Lagrange Clouds) containing mainly Peduncle Trees of various types. Also plenty of ELW, Water Worlds and Biosignals in the area.
